

SYNTHETIC TEST ONLY - circular R-M rendering

Unrooted phylogeny; serialization anchor is a display choice. Radial distances retain input branch lengths.

Rings, inner to outer: I | II (including IIG) | III | IV

White: screened nondetection. Grey: unknown / incomplete / unresolved. Presence: complete predicted architecture.

Accession-keyed cells; no unresolved result is treated as biological absence. Dashed leaders are not phylogenetic edges.

0.05 substitutions/site
